

NEXT GENERATION WEIGHT LOSS TREATMENT

INTRODUCING SEMAGLUTIDE PEPTIDE THERAPY

Do you struggle to lose weight and have tried diet after diet, only to gain all your weight back? A new modern, medical solution for weight loss is here! Semaglutide is an **FDA-approved** prescription peptide for weight management. It is a weekly injectable that can be done from home that helps regulate blood sugar levels, regulate appetite, slows down the emptying of the stomach, and controls your body's glucose production. Our Semaglutide is compounded with L-Carnitine to help you safely lose weight and keep it off.

What is Semaglutide?

Semaglutide is a glucagon-like peptide (GLP-1) analog. GLP-1 is a peptide hormone produced in the small intestine that stimulates insulin secretion and inhibits glucagon secretion, slows gastric emptying, and regulates appetite – all which aid in healthy and effective weight loss. L-Carnitine is added to give you energy while you are on your journey to healthy weight loss.

BENEFITS

- Healthy weight loss
- Appetite control
- Balanced glucose levels
- Meal portion control
- Reduced food cravings

What results can I expect?

In a 68-week study* overweight or obese adults receiving weekly Semaglutide injections showed the following results:

- **Average of 15% loss of total body weight**
(i.e. a 232 lb. man may lose an average of 35 lbs.)

- Nearly 70% achieved a 10% weight loss threshold
- 32% of participants lost at least 20% of their initial weight

When can I expect results?

While patients will notice some significant body weight loss in the first month, the full benefits are usually fully noticed after three to six months of treatment. (*Results may vary based on treatment plan)

In 28 weeks, participants lost 16% of their body weight.

*Based on an average of 15% loss of total body weight

*Side effects may occur and include the following: Low blood sugar (in people with type 2 diabetes), upset stomach, heartburn, burping, gas, bloating, nausea, vomiting, stomach pain, loss of appetite, diarrhea, constipation, stomach flu symptoms, headache, dizziness, and tiredness.
